

PRANAV JAGTAP

Pune, Maharashtra · +919766537007 · pranavjagtap7007@gmail.com · [LinkedIn](#) · [Medium](#) · [Portfolio](#)

Results-driven Full Stack AI Engineer with 2.5+ years of experience designing and building robust applications using .NET & Python technologies. Skilled in implementing secure microservices, REST APIs, working across multiple industry domains, and optimizing performance. Proven ownership of features end-to-end, from prototype to production across microservices architecture, multi-region platform design, and AI integrations. Passionate about process optimizations & currently collaborating on architectural decisions at a startup scale.

PROFESSIONAL EXPERIENCE

Avalpha Technologies

Nov 2025 – Present

Full Stack Developer

Astro

- Architected microservices-based backend systems, owning API design and service communication end-to-end; optimised **25+ legacy endpoints** and built v2 APIs, cutting average response times by **50%**.
- Reduced database storage by **35%** through PostgreSQL optimisation (indexing, query refactoring, data archival, and normalization).
- Designed and shipped a wholesale Amazon **product search service** (POC to pay-as-you-go production feature); fine-tuned an OpenAI model with adjusted sampling parameters and context prompts for accurate product matching via SP-API and Keepa.
- Implemented **multi-marketplace support** (US, UK, Germany, Canada) with dynamic currency handling and a factory-pattern profit & tax calculation module per country/region.
- Integrated Stripe (payments), Styche (auth), MessageBird (messaging), Amazon SP-API, and Keepa to power core product capabilities.
- Delivered a **subscription system** with monthly/yearly plans and feature-based access control per user using Stripe for payment processing, including webhook handling for **end-to-end payment workflow** automation.
- Built and maintained CI/CD pipelines via GitHub Actions & Azure DevOps with PR validation workflows.
- Managed test & production environments on Azure (App Services, PostgreSQL, Key Vault, Application Insights, Service Bus)
- Worked on a **browser extension** using the WXT framework to deliver product functionality directly in the browser. Contributed to React frontend applications for feature development and bug fixes.
- Contributed to an internal admin panel for monitoring user behaviour, insights, subscription status, payment activity, limit consumption, and manual overrides.
- Mentored junior developers, conducted code reviews, and collaborated directly with the CTO on architectural decisions.

Prismatic Softwares Pvt. Ltd.

Sept 2023 – Nov 2025

Software Engineer

TOX

- Developed multiple **console applications** as POC that perform read/write operations with PLCs of different vendors such as Allen-Bradley, Siemens & Mitsubishi.
- Optimized code to **reduce the cycle time** of key functions (heartbeat & traceability) by **40%**.
- Developed multiple **REST APIs**, such as user management with **JWT authentication and audit logging**.
- Used Entity Framework **ORM** and **LINQ** in an **N-tier** architecture for data access.
- Tech Stack: **.NET Core Web API, C#, PostgreSQL, Postman**

Sunloc

- Designed and developed the database schema for the **predictive analysis** module.
- Designed an autonomous production planning system & developed a **data transfer** module.
- Designed and deployed the **barcode & auto-scanning** backend as per client requirements.
- Developed multiple REST APIs in the calculation and raw material processing modules.
- Implemented **JWT authentication** & audit trail across all APIs.
- Applied **Repository and Dependency Injection** patterns to streamline data access.
- Tech Stack: **.NET Core MVC, C#, PostgreSQL, MS SQL Server, Postman**

SPACE

- Worked on a CRM-based project for a construction firm.
- Developed sorting and filtering features, improving frontend performance and UX.
- Built REST APIs and **stored procedures** to simplify backend data aggregation.
- Developed stored procedures for accumulating data from various tables to reduce the complexity of the backend code.
- Created **Partial views** for the dashboard.
- Tech Stack: **.NET Framework 4.8, C#, HTML, Bootstrap, AJAX, jQuery, MS SQL Server, SVN**

Prismatic Softwares Pvt. Ltd.

Feb 2023 – Aug 2023

Intern Software Engineer

Login Page Automation

- Created Python scripts to convert Figma image mockups to HTML/CSS using OCR and image processing.
- Increased automation efficiency by 60% for login/signup page development.
- Tech Stack: **Python, Flask, Pytest, Selenium, OpenCV, Pillow, matplotlib**

File Handling

- Built REST APIs for file processing and CRUD operations on MySQL. Worked with TXT, CSV, Word, and PDF file handling in Python.
- Dealt with different scenarios in Python file handling with TXT, CSV, Word, and PDF files.
- Tech Stack: **Python, Jupyter Notebook, SQLAlchemy, Flask**

EDUCATION

Dr. Babasaheb Ambedkar Technological University, Lonere.

Aug 2019 - Aug 2023

B.Tech, Computer Engineering

CGPA: **8.4**

Arihant College of Arts, Commerce & Science, Pune.

2017 - 2019

HSC, Class 12th

Score: **72%**

TECHNICAL SKILLS

Programming: C#, Python, JavaScript, SQL

Frameworks: .NET Core (MVC & Web API), .NET 4.8, FastAPI, Entity Framework, Flask, CrewAI

AI/GenAI: LLM APIs (OpenAI, xAI, Gemini), RAG, Vector DBs (pgvector, Chroma), Prompt Engineering

Web Technologies: HTML, CSS, JavaScript, React, NextJS, EXT, MaterialUI, Bootstrap, jQuery, AJAX

Databases: SQL Server, PostgreSQL, MySQL, Redis, MongoDB, Aerospike

Tools: Git, Docker, Jira, Apache SVN, Postman, Swagger, Kafka, Instantly, Intercom

Integrations: Stripe, Stytych, Amazon SP-API, Keepa, MessageBird, Hotjar

PROJECTS

Financial Document Analyzer ([Link](#))

Built a full-stack financial analysis system designed to process financial documents like quarterly reports and balance sheets asynchronously and present the results through a modern, responsive user interface. The system leverages a powerful **Python**-based backend (**FastAPI**) for computation and a dynamic **React** frontend for visualization with the LLMs.

Portfolio Website ([Link](#))

Developed a responsive and clean portfolio site using **React with Vite** for fast development and deployment. Used **JSON-based dynamic rendering** for project data instead of hard-coded HTML. Deployed the project using **Netlify** with optimized build settings.

Final Year Project - Login Page Generator ([Link](#))

Developed a web app that converts an image of a login page into HTML and CSS code by using Optical Character Recognition and image processing techniques like Canny edge detection and contour detection.

EXTRA-CURRICULAR ACTIVITIES

Guinness World Record event, Guvi India | AICTE ([Link](#))

A participant and winner of a Guinness World Record event organized by Guvi India. I wrote a code snippet for building a face recognition application using Python.

Spark AR Community Hackathon, Reskill | Spark AR ([Link](#))

Successfully created and deployed an Augmented Reality (AR) effect on popular social media platforms like Instagram and Facebook using Spark AR, which has **1.7 million opens** to date.

Smart India Hackathon 2020

A National-level hackathon - Smart India Hackathon 2020 participant as a First-year student.
