Top Skills

TypeScript
Software Design
.NET in Azure

Languages

Japanese (Elementary)
Hindi (Native or Bilingual)
Marathi (Native or Bilingual)
English (Full Professional)

Certifications

Google Cloud Fundamentals: Core Infrastructure
Getting Started with Python
Create and Manage Cloud Resources
Postman API Fundamentals Student Expert
Python Data Structures

Pranav Jagtap

Full Stack AI Engineer | .NET • React • FastAPI • Azure |
Microservices & GenAI Enthusiast
Pune District, Maharashtra, India

Summary

Full-Stack AI Engineer | Backend Developer | .NET & Python | GenAI Enthusiast

I'm a results-driven software engineer with 2.5+ years of experience designing and delivering scalable backend systems and AI-powered applications. My expertise spans .NET Core (Azure, MVC) and Python (FastAPI, Flask, LLM integration), where I've built secure, high-performance APIs, automated workflows, and production-grade services.

Recently, I've been focused on building GenAI applications, including integrating OpenAI APIs, implementing retrieval-augmented generation (RAG) pipelines with pgvector, and orchestrating AI workflows using LangChain. I also collaborate closely with React teams to deliver seamless user experiences and have a solid grounding in databases (PostgreSQL, SQL Server, MySQL), Docker, and Kafka.

I enjoy taking features from prototype to production, solving complex problems end-to-end, and ensuring reliability, performance, and maintainability. Always curious and hands-on, I thrive in environments that encourage experimentation, innovation, and impact.

Open to connecting about technology, ideas, or opportunities to build cutting-edge AI-driven solutions.

Experience

Avalpha Technologies
Full Stack Developer
November 2025 - Present (9 months)

- Architected and delivered microservices-based backend systems, owning API design and service communication end-to-end.
- Optimised 25+ legacy endpoints and developed v2 APIs, reducing average response times by 50%.
- Reduced database storage by 35% through PostgreSQL optimisation strategies.
- Built an AI-powered product search service, starting as a POC & shipping as a pay-as-you-go production feature, using a fine-tuned OpenAI model with optimised sampling parameters & context prompting.
- Implemented multi-marketplace support covering US, UK, and Germany, including dynamic currency handling and a factory pattern-based profit & tax calculation module per country.
- Delivered a subscription system with monthly/yearly plans and feature-based access control per user using Stripe for payment processing including webhook handling for end-to-end payment workflow automation
- Integrated third-party services including Stripe, MessageBird, Stytech, Keepa, and Amazon SP-API to enable core product capabilities.
- Worked on a browser extension using the WXT framework, consuming internal APIs to deliver product functionality directly in the browser.
- Contributed to an internal admin panel for monitoring user behaviour, insights, subscription status, payment activity, limit consumption, and manual overrides.
- Built and maintained CI/CD pipelines using GitHub Actions and Azure DevOps, including PR validation workflows to enforce code quality.
- Managed test & production environments on Azure across App Services, PostgreSQL, Key Vault, Application Insights, and Service Bus, etc.
- Contributed to React frontend applications for feature development and bug fixes.

- Mentored junior developers, conducted code reviews, and guided architectural decisions across the team.

Prismatic Softwares Private Limited

2 years 10 months

Software Engineer

September 2023 - November 2025 (2 years 3 months)

Pune

- Built and maintained scalable backend systems for AI-driven and enterprise applications using .NET Core (C#) and FastAPI (Python), supporting production workloads across multiple domains.
- Designed and developed RESTful APIs with secure authentication (JWT), role-based access, and audit logging to support user management and system traceability.
- Implemented GenAI features, including LLM integrations, multi-agent document processors, prompt orchestration, and RAG pipelines using vector databases such as pgvector and Chroma.
- Developed backend services in .NET Core (Web API & MVC) following N-tier architecture, applying Repository and Dependency Injection patterns for clean, maintainable code.
- Worked on industrial and enterprise integrations, including backend services that communicate with external systems and hardware interfaces (developed a C# wrapper for communicating with PLCs), ensuring reliability and performance.
- Optimized backend workflows and critical services, reducing processing latency and improving system responsiveness by up to 40%.
- Designed and managed relational databases (PostgreSQL, SQL Server, MySQL), including schema design, complex queries, and stored procedures for efficient data aggregation.
- Built asynchronous background jobs and automation services to handle long-running tasks and system monitoring.

- Containerized applications using Docker and collaborated on event-driven components using Kafka for utilizing CDC.
- Collaborated closely with frontend (React) teams, product managers, and QA to deliver end-to-end features with a strong focus on stability and user experience.

Software Engineer Intern

February 2023 - August 2023 (7 months)

Pune, Maharashtra, India

- Developed Python scripts that take input of Figma illustrations as images and output the HTML and CSS code for that image using Image Processing and OCR techniques, improving the overall efficiency by 60%.
- Learned and used methods like Optical Character Recognition (OCR) and Image Processing techniques like Canny edge detection, contour detection, Thresholding, etc.
- Developed and implemented numerous REST APIs in a client project with Flask and SQLAlchemy.
- Dealt with different CRUD operations in tables in the MySQL database.
- Dealt with different scenarios in Python file handling with txt, csv, word and pdf files.
- Pytesseract | Keras | OpenCV | Pillow | matplotlib

Pregrad

Campus Ambassador

December 2022 - February 2023 (3 months)

Digiyoda Media Group

Data Annotator

November 2020 - January 2021 (3 months)

Remodeled image annotations for a fashion-related startup to improve their machine learning solutions with high-quality, human-annotated image data for greater precision and accuracy. We also reviewed and moderated offensive content, annotated images to improve search functionality.

Education

Dr. Babasaheb Ambedkar Technological University

Bachelor of Technology - BTech, Computer Science · (2019 - 2023)

Arihant Education Foundations Arts, Science & Commerce College,
Pune

HSC, Science · (2017 - 2019)
