SKILLS

LANGUAGES

C# • Python • SQL • JavaScript

BACKEND FRAMEWORKS

.NET Core (Web API & MVC)

FastAPI • Flask

CrewAI • LangChain

AI / GENAI

OpenAI, Gemini LLMs (fine-tuning)

Prompt Engineering

RAG Pipelines

pgvector • Chroma

LangSmith / Langfuse

DATABASES

PostgreSQL • SQL Server

Redis • Aerospike

MySQL • MongoDB

CLOUD & DEVOPS

Azure App Services

Azure Key Vault • App Insights

Azure Service Bus

GitHub Actions • Azure DevOps

Docker • Kafka

INTEGRATIONS

Stripe • Stytle

Amazon SP-API • Keepa

MessageBird • Hotjar

FRONTEND

React • NextJS

HTML • CSS • JavaScript

WXT • MaterialUI

SUMMARY

Full-Stack AI Engineer with **2.5+ years** of experience delivering scalable backend systems and GenAI applications using **.NET Core, FastAPI, and LLM integrations**. Proven ownership of features end-to-end, from prototype to production — across microservices architecture, and multi-region platform design. Passionate about process optimizations & currently collaborating on architectural decisions at a startup scale.

EXPERIENCE

AVALPHA TECHNOLOGIES | FULL STACK DEVELOPER

Nov 2025 - Present | Pune, India (Remote)

Astro

- Architected microservices-based backend systems, owning API design and service communication end-to-end; optimised **25+** legacy endpoints and built v2 APIs, cutting average response times by **50%**.
- Reduced database storage by **35%** through PostgreSQL optimisation (indexing, query refactoring, data archival).
- Designed and shipped a **wholesale Amazon product search service** (POC to pay-as-you-go production feature); fine-tuned an OpenAI model and context prompts for accurate product matching via SP-API and Keepa.
- Implemented **multi-marketplace support** (US, UK, Germany, Canada) with dynamic currency handling and a **factory-pattern profit & tax calculation module** per country/region.
- Integrated Stripe (payments), Stytle (auth), MessageBird (messaging), Amazon SP-API, and Keepa to power core product capabilities.
- Delivered a subscription system with monthly/yearly plans and feature-based access control per user using Stripe, including webhook handling for **end-to-end payment workflow** automation.
- Built and maintained CI/CD pipelines via GitHub Actions and Azure DevOps with PR validation workflows; managed production on Azure.

PRISMATIC SOFTWARES PVT. LTD. | SOFTWARE ENGINEER

Sept 2023 - Oct 2025 | Pune, India

TOX

- Developed a **C# wrapper for PLC communication** and console application POCs for read/write operations with PLCs of different vendors (Allen-Bradley, Siemens, Mitsubishi).
- Optimised critical backend workflows, reducing processing latency of key functions (heartbeat & traceability) by up to **40%**.
- Developed RESTful APIs with JWT authentication and audit logging; built async background jobs for long-running tasks and system monitoring.

Sunloc

- Implemented GenAI features: LLM integrations, multi-agent document processors, prompt orchestration, and **RAG pipelines** using pgvector and Chroma vector databases.
- Designed database schema for the predictive analysis module; developed autonomous production planning and data transfer modules.
- Developed barcode & auto-scanning backend, REST APIs for calculation and raw material processing modules.
- Applied **Repository & Dependency Injection** patterns following N-tier architecture; containerised applications with Docker and contributed to event-driven architecture using Kafka for CDC workflows.
