

PRANAV JAGTAP

Pune, Maharashtra · +919766537007 · pranavjagtap7007@gmail.com · [LinkedIn](#) · [Medium](#) · [Portfolio](#)

Results-driven Full Stack AI Engineer with **3 years of experience** designing & building robust applications using .NET & Python technologies. Skilled in implementing secure microservices, REST APIs, working across multiple industry domains, & optimizing performance. Proven ownership of features end-to-end, from prototype to production across microservices architecture, multi-region platform design, & AI integrations. Passionate about process optimizations & currently collaborating on architectural decisions at a startup scale.

PROFESSIONAL EXPERIENCE

Avalpha Technologies

Nov 2025 – Present

Full Stack Developer

Astro

- Architected microservices-based backend systems, owning API design & service communication end-to-end; optimised **25+ legacy endpoints** & built v2 APIs, cutting average response times by **50%**.
- Owned full-stack delivery across 8 production repositories (.NET 9/EF Core/PostgreSQL backend, React 19 frontends, a browser extension) - **1,000+ commits**, 180+ merged PRs, over **~9 months**.
- Re-architected a **dashboard analytics** feature from live, multi-table runtime aggregation to a precomputed snapshot table with async recalculation via Azure Service Bus, cutting dashboard load queries from multi-join aggregation to a single indexed lookup, reducing latency by **70%**.
- Implemented **Stripe-based subscription** billing **end-to-end**: monthly/yearly plans, feature-gated access control, **webhook**-driven lifecycle handling (upgrades, cancellations, failed payments) with idempotency & a **reconciliation** job as a safety net for missed webhook events.
- Performed end-to-end custom domain and **DNS configuration** on GoDaddy for two production sites: A/CNAME record setup for Azure Static Web Apps, migrating domain DNS hosting from SiteGround to GoDaddy while keeping the live WordPress site online during transition, then cut over to the new stack once validated.
- Reduced database storage by **35%** through PostgreSQL optimisation (indexing, query refactoring, data archival, & normalization).
- Built an AI multipack detection/correction pipeline using OpenAI's Responses API with **async batch processing** over Azure Service Bus & real-time progress via SignalR.
- Designed & shipped a wholesale Amazon **product search service** (POC to pay-as-you-go production feature); fine-tuned an OpenAI model with adjusted sampling parameters & context prompts for accurate product matching via SP-API & Keepa.
- Implemented **multi-marketplace support** (US, UK, Germany, Canada) with dynamic currency handling & a **factory-pattern** profit & tax calculation module per country/region.
- Integrated Stripe (payments), Stytych (auth), MessageBird (messaging), Amazon SP-API, & Keepa to power core product capabilities.
- Migrated a region-specific marketing site from **WordPress/SiteGround** to a React SPA on **Azure Static Web Apps**, standing up CI/CD (GitHub Actions), custom domain cutover, & SSL.
- Built a supplier procurement module from scratch - Supplier Lead intake, approval workflow, Active Supplier conversion, & Purchase Order/invoice tracking.
- Built & maintained CI/CD pipelines via GitHub Actions & Azure DevOps with PR validation workflows.
- Managed test & production environments on Azure (App Services, PostgreSQL, Key Vault, Application Insights, Service Bus)

- Worked on a **browser extension** using the WXT framework to deliver product functionality directly in the browser. Contributed to React frontend applications for feature development & bug fixes.
- Contributed to an internal admin panel for monitoring user behaviour, insights, subscription status, payment activity, limit consumption, & manual overrides.
- Mentored junior developers, conducted code reviews, & collaborated directly with the CTO on architectural decisions.

Prismatic Softwares Pvt. Ltd.

Sept 2023 – Nov 2025

Software Engineer

TOX

- Developed multiple **console applications** as POC that perform read/write operations with PLCs of different vendors such as Allen-Bradley, Siemens & Mitsubishi.
- Optimized code to **reduce the cycle time** of key functions (heartbeat & traceability) by **40%**.
- Developed multiple **REST APIs**, such as user management with **JWT authentication & audit logging**.
- Used Entity Framework **ORM** & **LINQ** in an **N-tier** architecture for data access.
- Tech Stack: **.NET Core Web API, C#, PostgreSQL, Postman**

Sunloc

- Designed & developed the database schema for the **predictive analysis** module.
- Designed an autonomous production planning system & developed a **data transfer** module.
- Designed & deployed the **barcode & auto-scanning** backend as per client requirements.
- Developed multiple REST APIs in the calculation & raw material processing modules.
- Implemented **JWT authentication** & audit trail across all APIs.
- Applied **Repository & Dependency Injection** patterns to streamline data access.
- Tech Stack: **.NET Core MVC, C#, PostgreSQL, MS SQL Server, Postman**

SPACE

- Worked on a CRM-based project for a construction firm.
- Developed sorting & filtering features, improving frontend performance & UX.
- Built REST APIs & **stored procedures** to simplify backend data aggregation.
- Developed stored procedures for accumulating data from various tables to reduce the complexity of the backend code.
- Created **Partial views** for the dashboard.
- Tech Stack: **.NET Framework 4.8, C#, HTML, Bootstrap, AJAX, jQuery, MS SQL Server, SVN**

Prismatic Softwares Pvt. Ltd.

Feb 2023 – Aug 2023

Intern Software Engineer

Login Page Automation

- Created Python scripts to convert Figma image mockups to HTML/CSS using OCR & image processing.
- Increased automation efficiency by 60% for login/signup page development.
- Tech Stack: **Python, Flask, Pytesseract, OpenCV, Pillow, matplotlib**

File Handling

- Built REST APIs for file processing & CRUD operations on MySQL. Worked with TXT, CSV, Word, & PDF file handling in Python.
- Dealt with different scenarios in Python file handling with TXT, CSV, Word, & PDF files.
- Tech Stack: **Python, Jupyter Notebook, SQLAlchemy, Flask**

EDUCATION

Dr. Babasaheb Ambedkar Technological University, Lonere.

Aug 2019 - Aug 2023

B.Tech, Computer Engineering

CGPA: **8.4**

Arihant College of Arts, Commerce & Science, Pune.

2017 - 2019

HSC, Class 12th

Score: **72%**

TECHNICAL SKILLS

Programming: C#, Python, JavaScript, SQL

Frameworks: .NET Core (MVC & Web API), .NET 4.8, FastAPI, Entity Framework, Flask, CrewAI

AI/GenAI: LLM APIs (OpenAI, xAI, Gemini), RAG, Vector DBs (pgvector, Chroma), Prompt Engineering

Web Technologies: HTML, CSS, TypeScript, React, NextJS, WXT, MaterialUI, Bootstrap, jQuery, AJAX

Databases: SQL Server, PostgreSQL, MySQL, Redis, MongoDB, Aerospike

Tools: Git, Docker, Jira, Apache SVN, Postman, Swagger, Kafka, Instantly

Integrations: Stripe, Stytych, Amazon SP-API, Keepa, MessageBird, Hotjar, Intercom

PROJECTS

Financial Document Analyzer ([Link](#))

Built a full-stack financial analysis system designed to process financial documents like quarterly reports & balance sheets asynchronously & present the results through a modern, responsive user interface. The system leverages a powerful **Python**-based backend (**FastAPI**) for computation & a dynamic **React** frontend for visualization with LLMs.

Portfolio Website ([Link](#))

Developed a responsive & clean portfolio site using **React with Vite** for fast development & deployment. Used **JSON-based dynamic rendering** for project data instead of hard-coded HTML. Deployed the project using **Netlify** with optimized build settings.

Final Year Project - Login Page Generator ([Link](#))

Developed a web app that converts an image of a login page into HTML & CSS code by using Optical Character Recognition & image processing techniques like Canny edge detection & contour detection.

EXTRA-CURRICULAR ACTIVITIES

Guinness World Record event 2021, Guvi India | AICTE ([Link](#))

A participant & winner of a Guinness World Record event organized by Guvi India. I wrote a code snippet for building a face recognition application using Python.

Spark AR Community Hackathon 2022, Reskill | Spark AR ([Link](#))

Successfully created & deployed an Augmented Reality (AR) effect on popular social media platforms like Instagram & Facebook using Spark AR, which has **1.7 million opens** to date.

Smart India Hackathon 2020

A National-level hackathon - Smart India Hackathon 2020 participant as a First-year student.
